

Green Core Values

what is green?

Green refers to design and construction practices that significantly preserve our natural environment and promote healthier living for people.

what drives green design at AMDG?

Commitment to caring for our community
Commitment to designing healthy environments for people
Commitment to investing wisely

what is stewardship?

We've been given the earth and have been entrusted to care for it. People are responsible for the earth and the things they've been given - money, time, talents, and resources. At AMDG, green design refers to design and construction practices that promote stewardship of resources, energy, materials, and the environment. This approach to design prioritizes human comfort and health, encourages a connection with God's creation, and displays an active commitment to an investment in the future.

why go green?

It's a wise investment in the future.
It creates a better environment to live and work in.
It's our social responsibility.

how do we implement green?

Sustainable Site Planning
Safeguarding Water and Water Efficiency Design
Energy Efficiency and Renewable Energy Design
Design for Human Needs and Well-Being
Conservation of Materials and Resources

levels of implementation

The low hanging fruit - common sense strategies
The heart of the tree - prioritization analysis
The upper canopy - cutting edge technology
